-

## Step 1 — Battery

- Turn the controller on its backside and push the "eject" button to discharge the battery compartment door on the bottom of the controller.
- Pull the two AA batteries out.

## Step 2 — Back Panel

- Remove the holographic Microsoft sticker with the precision tweezers to reveal a small screw.
- Use a T6 Torx screwdriver to remove the 1.5mm screw.

## Step 3

- Insert a spudger and pry at these three locations to detach the middle cover.
- Pull off the middle piece cover to reveal three screws.
- Use a T8 Torx screwdriver to remove the three 2.3mm screws.
- Remove the cover.

## Step 4

- Remove the two 90mm screws with a T8 Torx screwdriver.
- Lift up the silver middle piece to remove.

## Step 5

- Use a spudger to remove the silver prong.
- With the spudger, pinch the metal spring and slowly pull up to remove.
  - Use the spudger to remove eject button.
- Remove the screw holding in the eject button with a T8 Torx screwdriver.

## Step 6

 This step is very difficult and may require a third hand.

- Pull the two halves apart at the bottom to detach the two latches that are holding the front and back panels together.
- Start with one side of the controller (left or right).
- Slide the spudger towards the end of the handles and pry the two halves apart. Do the same for the opposite side.
- ⓘ The white circular caps at the top of the controller will pop off by applying light force.
- Pull the front and back panels apart to separate them and expose the inside of the controller.

## Step 7 — Battery Compartment

- Lift the battery compartment out of the controller and set it outside of the controller.  
 Do not yank, stress, or pull on the wires for removal.
- Use the precision tweezers to pull out the red and black wire attached to the white plug at the bottom side of the circuit board.

## Step 8 — Rumble Motor

- Use precision tweezers to remove the red and black wires that are attached to the circuit board.
-  The rumble motors will easily lift out of the controller once the wires are detached.

To reassemble your device, follow these instructions in reverse order.
