Step 1 — Battery

- Place the device down on its front with the back facing upward.

- Split the two faces of the device with a plastic opening tool to pry the back cover off.

- Remove the silver/metallic tape covering the bottom end of the tablet.

Step 2

- Remove the red & black wire that connects the motherboard to the bottom end of the tablet.

- Remove the ribbon cable over the battery by flipping up the plastic tab on the ZIF connector on either side of the cable and pulling it out.

Step 3

- Remove the red & blue cord connecting the battery to the motherboard.

- Remove the tape connecting the motherboard to the back of the LED screen.

- Pry open with a plastic opening tool along the top and bottom edges until the battery is free from the device.

- Remove all the remaining tape from the battery.

- ⓘ It may be helpful to [remove the motherboard](#) prior to prying the battery out for better leverage on the edges.

To reassemble your device, follow these instructions in reverse order.
