

iPhone 6 Display Replacement

iPhone 6 Display Replacement. With working touch ID.

Written By: Garrett Register

The background image is a blurred photograph of a person's hands in white gloves working on a device. The person is holding a small, gold-colored component, likely a display or touch ID sensor. The background is a bright blue with some out-of-focus lights. Overlaid on this image is the title 'IPHONE 6 DISPLAY DIY REPAIR GUIDE' in large, bold, red capital letters. At the bottom right, there is another line of red text: 'W/ TOUCH ID **'. On the left side, there is some partially visible white text: 'BIT', 'ONS', and '- VFX'.

IPHONE 6 DISPLAY DIY REPAIR GUIDE

W/ TOUCH ID **

INTRODUCTION

Apple makes it extremely tedious to work on their devices yourself due to non-standard screw bits and the inability to replace the home buttons and displays with functioning touch ID/FaceID/True Tone without Apple's special proprietary software.

In this video we are going to be showing you how correctly perform a display replacement on an iPhone 6 with functioning TouchID.

Toolkit - <https://amzn.to/37ow346>

iSesamo - <https://amzn.to/36hv7xa>

Repair Mat - <https://amzn.to/2RI5mrq>

Heatgun - <https://amzn.to/2Gffegh>

To reassemble your device, follow these instructions in reverse order.
