

# G'z One Boulder Double Sided Display Replacement

This is guide that can be used to install the Double Sided Display in the event it is broken or damaged.

Written By: Raymond Caulder

## **TOOLS:**

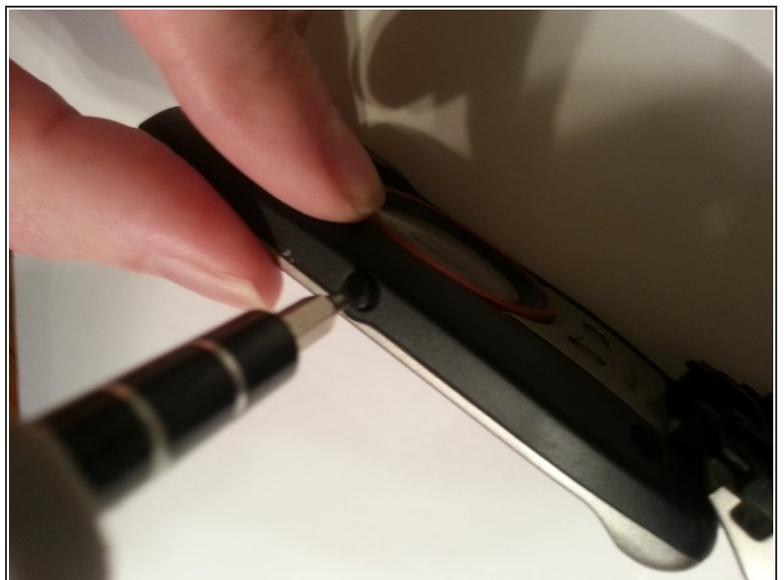

- Flathead 3/32" or 2.5 mm Screwdriver (1)
-

## Step 1 — Inside Screen Cover

- There are 4 black screws that need to be removed on the top of the lid. A 1.5mm flathead screwdriver will work on the star shaped screw heads.
- ⓘ Make note that two of the screws closest to the hinge are longer than the other two.

## Step 2

- Remove the two side screws.

⚠ *When reassembling you may need to press the front and back of the lid together when inserting these side screws so that the holes align.*

### Step 3

- Use a plastic opening tool to remove the screen cover from the rest of the lid.

### Step 4

- Your phone should look like the picture to the left.

- ☑ *If reassembling from a previous step make sure the ribbon cable is properly situated before securing the front cover.*

## Step 5 — Front Logic Board

- Remove one screw located on the left side of the phone with the pictured orientation in mind.
- This will release the logic board from the back case.
- Lift the board out of the case starting with the top. Continue to fold it forwards to access the ribbon cable still connecting it.

## Step 6

- Pull the logic board out with a pry stick gently from bottom to top at the current orientation.
- The ribbon cable will be connected underneath the logic board. A small amount of force is required to disconnect them.

**⚠** *Although some force is required to lift up the board, be careful as to not bend any of the pins on either side.*

## Step 7 — Double Sided Display

- Remove the connector at the bottom left side of the logic board with the pictured orientation in mind.

To reassemble your device, follow these instructions in reverse order.
