INTRODUCTION

Need to take pictures without touching the shutter button? or you just taking a group photo?
Remote viewfinder will help!

A android or a iOS 4-10.3.3 Device is needed to complete this guide.

TOOLS:

[Wi-Fi Connection](#) (1)

WPA2 or a WPA3

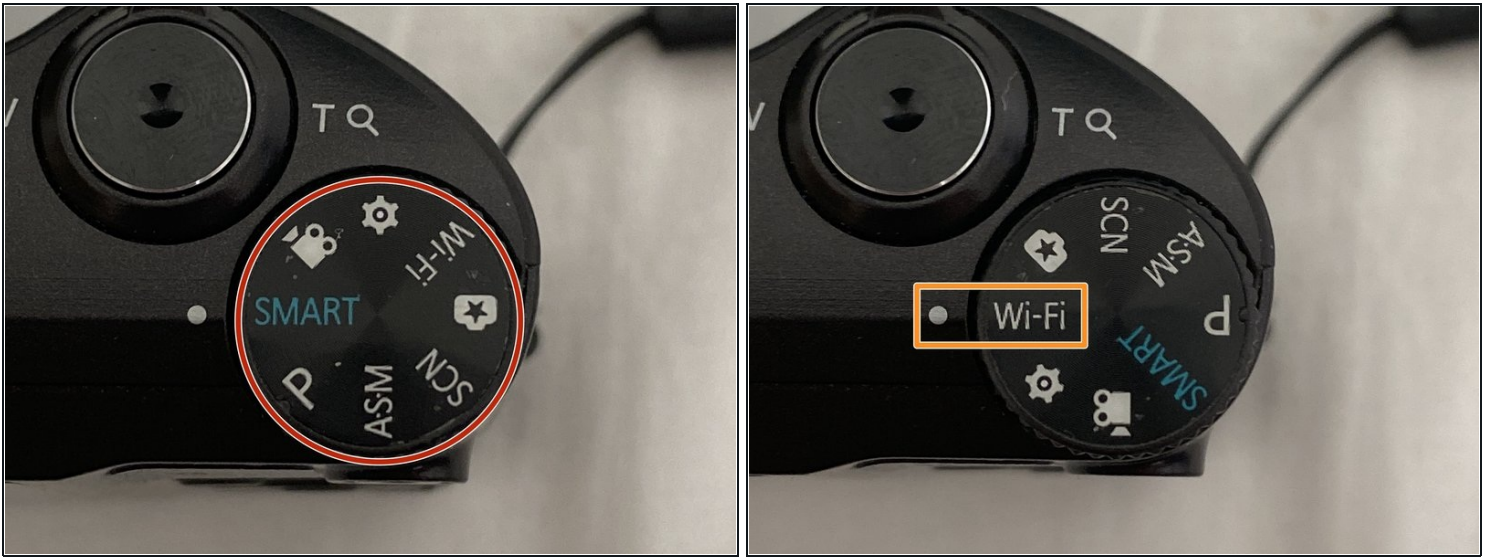

to download the app

Step 1 — Power on the device

- Turn on the device by pressing the button that's labeled **POWER** on the top.

Step 2 — Finding Remote Viewfinder

- Look at the wheel at the top
- Scroll until the dot is at **Wi-Fi**

Step 3

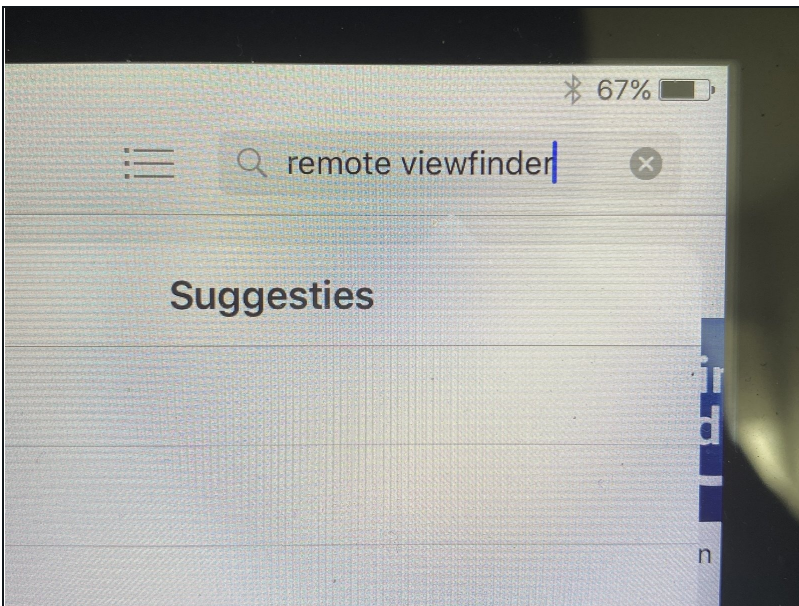

- Navigate using the Navigation wheel
 - Navigate until the blue glowing square is on Remote Viewfinder
- Press **OK**

Step 4 — Setting Up

- If everything done correctly, You will be on this screen, Time to install the viewfinder app.

Step 5 — Finding the app

- Search up *Remote ViewFinder* on App Store/Play Store

Step 6 — Downloading the app

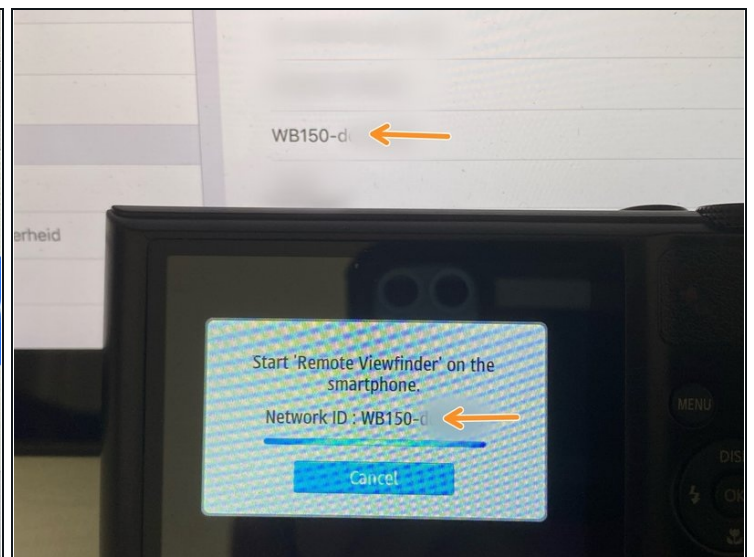

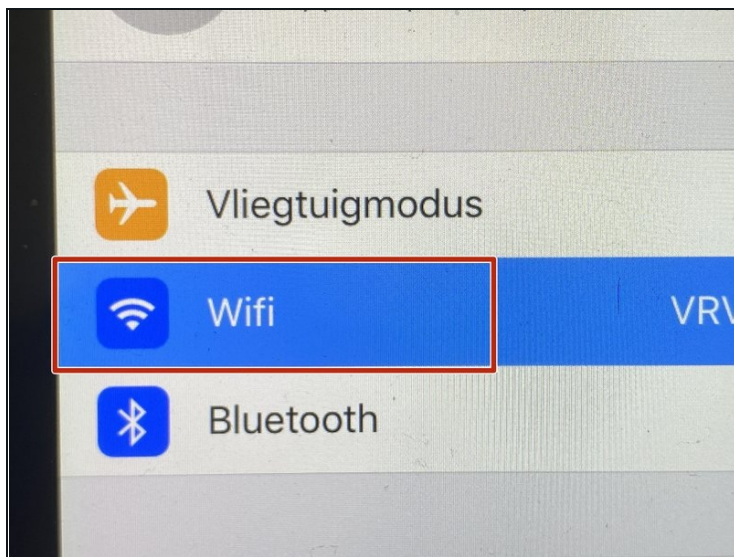

- When you found the app, Press the download button

- ① If it is a cloud, It means it was installed before, You will not need a password to download it.

- ⚠ The App Is pretty outdated, I suggest using iOS 4-10, It wont work on newer iOS

- ① An iPhone 5c or an iPad 4 works well.

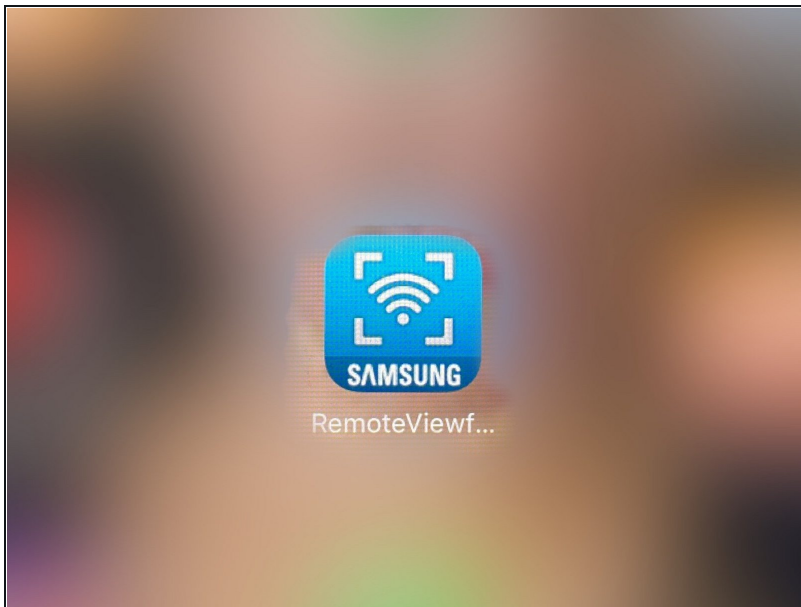

Step 7 — Connecting

- Open up settings and go to the Wifi Tab
- Connect your device to the cameras wifi.

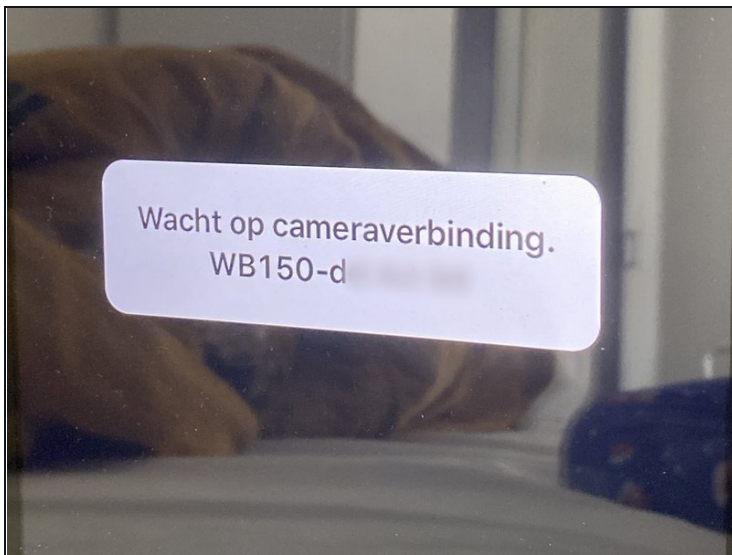

- ① The Wifi name should be the same as on the camera.

Step 8 — Starting the application

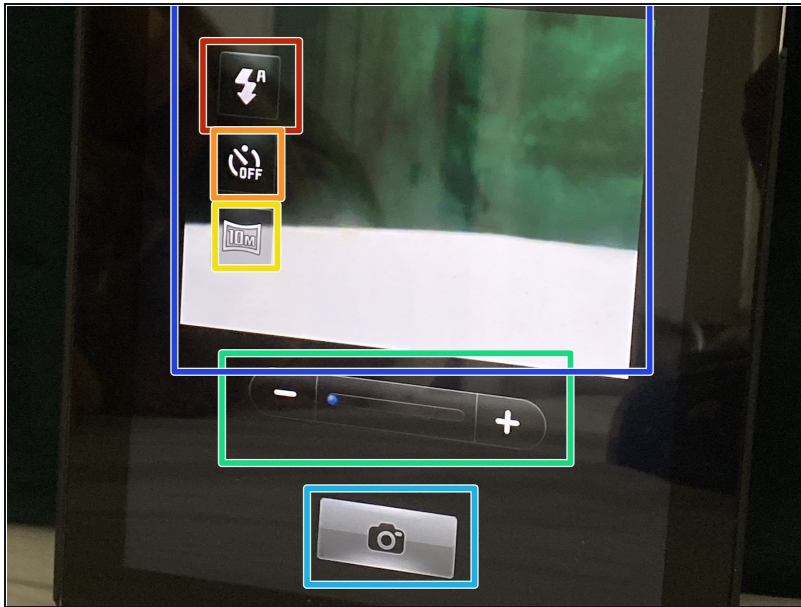

- Launch Remote Viewfinder on your device

Step 9 — Connecting to the camera

- Wait until its connected.
- If you see the screen of your camera Your camera is connected (see step 10 for controls)

Step 10 — Controls

- Flash
 - Timer
 - Photo Size
 - Zoom
 - Shutter Button
 - Camera View
- i** Tap the camera view to hide/show the menu.

Close the app, to disconnect your camera from the app
