

TomTom XXL 540 Screen Replacement

This will walk you through repairing a screen

Written By: Mike Sollars

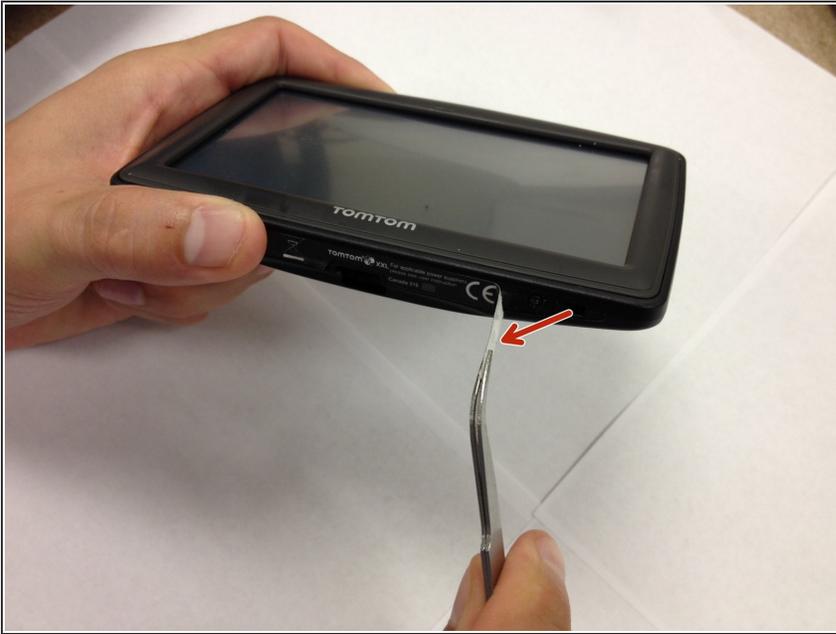

**TOOLS:**

- [T5 Torx Screwdriver](#) (1)
- [Tweezers](#) (1)

**PARTS:**

- [TomTom XXL Replacement 5" LCD Touchscreen & Digitizer](#) (1)

Step 1 — Screen

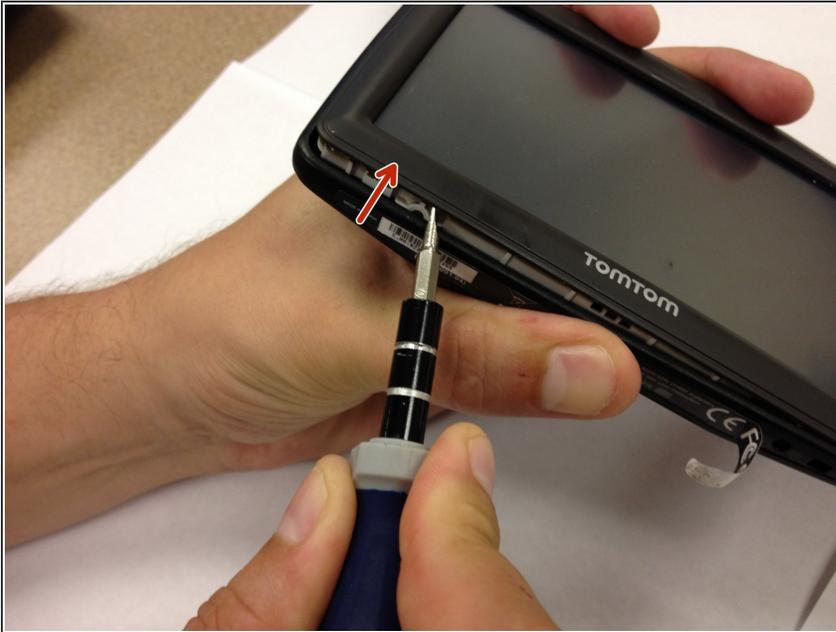

- Peel back the sticker, using the tweezers on the bottom of the device to reveal the two screws.

Step 2

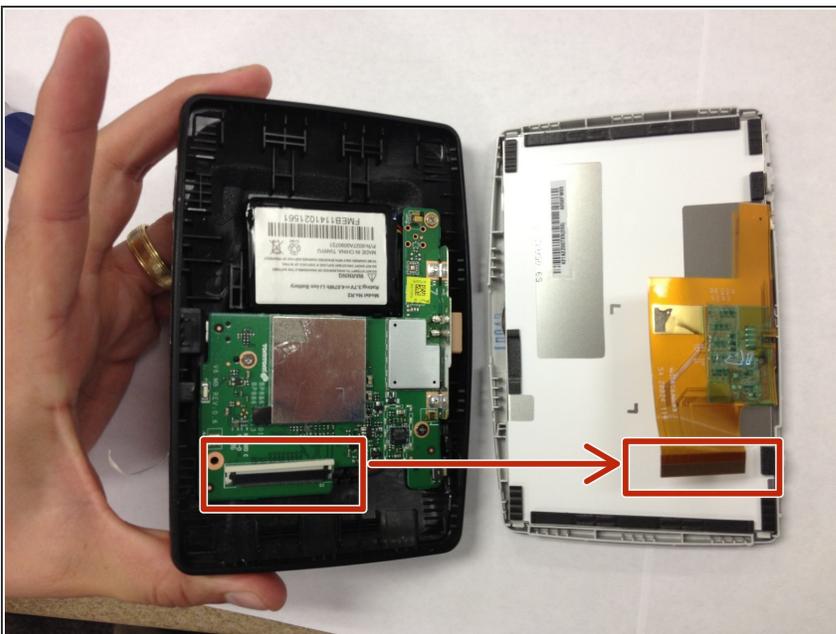

- Unscrew the two T5 screws using the T5 Torx Screwdriver.

Step 3

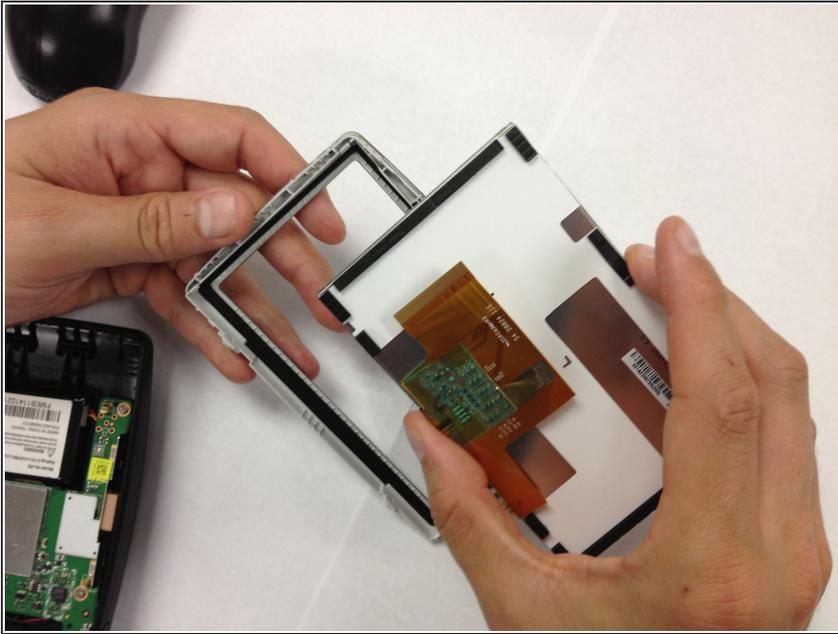

- Insert the flat head screwdriver into the edge of the device. Using it as a lever, carefully pry the face-plate up.

Step 4

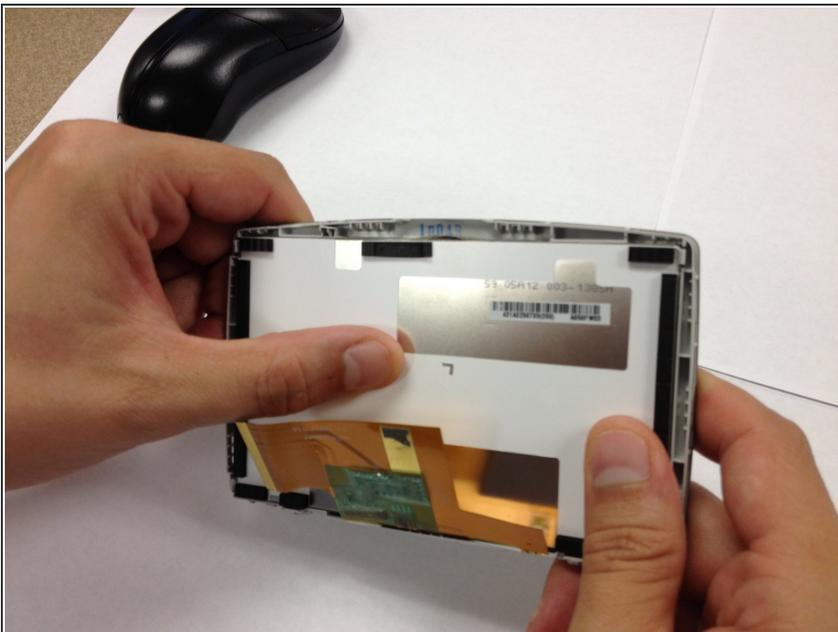

- Carefully grab the ribbon cable with two fingers and pull the yellow ribbon cable upwards away from the motherboard.

Step 5

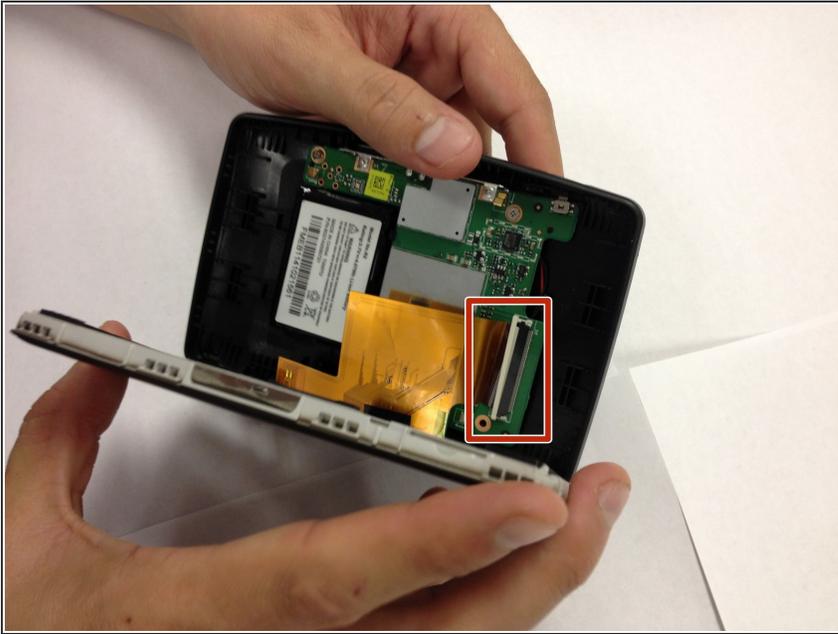

- Remove the screen from of the face-plate.

Step 6

- Insert the new screen into the face-plate.

Step 7

- Reattach the yellow ribbon cable to the motherboard.

Step 8

- Using two hands, hold both ends of the device and snap the two plates together.

Step 9

- Re-insert the two T5 screws and tighten.

Step 10

- Re-apply the label edges back down to cover the screws.

To reassemble your device, follow these instructions in reverse order.
