

# Toshiba NB205 N330PK Keyboard Replacement

This guide outlines how to remove and replace the keyboard assembly (3 Steps).

Written By: Mason McCaskill

 **TOOLS:**

- [Spudger](#) (1)
-

## Step 1 — Power Button

- Start by first removing the battery.
- Move the first release switch to the right position.
- Move the second release switch to the right position while pulling the battery towards the top of the netbook.

## Step 2

- Using the bit driver and a Phillips #0 bit, remove the three circled screws, 5 mm in length.
- Using the bit driver and a Phillips #0 Bit, remove the two circled screws labelled F6. (These hold the keyboard) one screw may be under a rubber stopper

## Step 3

- While holding the top of the netbook, flip the netbook over.

## Step 4

- Carefully lift off the power bar assembly for access to the button and receiver.

## Step 5 — Keyboard

- Use the spudger to gently pry around the keyboard. This will release the keyboard assembly from the body.

## Step 6

- Reach under the keyboard and disconnect the electrical connection.
- Lift the broken keyboard off.

## Step 7

- Reattach the new electrical connection into the old connection location.
- Place the keyboard into the original location starting with the bottom first.
- Gently press the keyboard down to secure it into its original location.
