Step 1 — Stand

- Place the monitor face down on a clean, flat surface.

Step 2

- Firmly remove the back panel of the stand by pulling it up and away from the monitor.

Step 3

- Unscrew the two 6mm Phillips PH2 screws to detach the stand enclosure from the stand.

Step 4

- Firmly grasp the stand enclosure with your hand and slide it to base of stand.

Step 5

- Unscrew the two 14.5mm Phillips PH2 screws holding the stand to the monitor.

Step 6

- Lift the the stand straight up to remove it.

Step 7 — Monitor Enclosure

- Place the monitor screen face up.

- Pull the frame off by placing your fingers on the inside of the frame and pulling out and up, the frame should snap off.

- Continue your way around the screen.

Step 8

- Unscrew the two 7mm screws from the bottom of the button assembly.

⚠ Do not pull the button assembly out too quickly or with too much force! Damage to the wires can occur.

- Pull the button assembly out a few inches and unplug the colored cables.

Step 9

- Unscrew the gold colored 7mm Phillips PH000 screw holding the button assembly to the monitor.

- Remove the button assembly from the monitor.

Step 10

- With the monitor face-down, unscrew the 5 7mm Phillips PH2 screws around the outside of the enclosure.
Step 11

- Unscrew the 2 14.5mm Phillips PH2 screws located on the raised center of the enclosure.
- Carefully pull the enclosure off the monitor.

Step 12

- Unscrew the 10 5mm Philips PH2 screws holding the metal casing to the monitor.

This document was generated on 2020-11-28 03:05:30 AM (MST).

Step 13

- Pull the the metal casing off of the monitor to reveal the motherboards.

Step 14 — Power Circuit Board

- Make a note or use a pen to mark which plugs correspond to which colors. (Pink or Blue)

- Remove the four plugs on the brown circuit board by pulling up on the tabs and wiggling them out. You could also use a spudger to help you lift little clips holding them in.

Step 15
- Locate the several multi-wire connectors on the board.

- ⓘ These connect several parts of each board together and consist of several different colors of wires. There is also a zip-tie holding the two sets of wires together that you can cut if it is getting in your way.

- Disconnect the three plastic connectors from the blue colored boards by pulling them up while wiggling them.

- ⓘ Some force is necessary, it may also help to use the Large Needle Nose Pliers.

Step 16
- Locate the large black power plug.

- Using a Phillips #1 Screwdriver, unscrew the two 8mm colts holding the black tabs to the metal frame.

Step 19

- Lift the brown power supply board off of the frame and set it aside.

Step 20 — Power Input

- Remove the solder from the three joints attached to the power input.

This document was generated on 2020-11-28 03:05:30 AM (MST).

Step 21
- Grab hold of the power supply jack and remove it from the power supply board.

- ⓘ A little force and a wiggling action may be needed to remove the power supply jack from the glue.

To reassemble your device, follow these instructions in reverse order.
