

# Acer Aspire One D150 Memory Upgrade Replacement

This guide will show you how to upgrade the memory in your Acer Aspire One D150.

Written By: Dante Bertana

## TOOLS:

- [Flathead Screwdriver](#) (1)
  - [Phillips #0 Screwdriver](#) (1)
-

## Step 1 — Memory Upgrade

- Be sure computer is unplugged, turned off, and battery is removed.
- Then, locate memory door and remove screw with #0 Phillips screw driver.

## Step 2

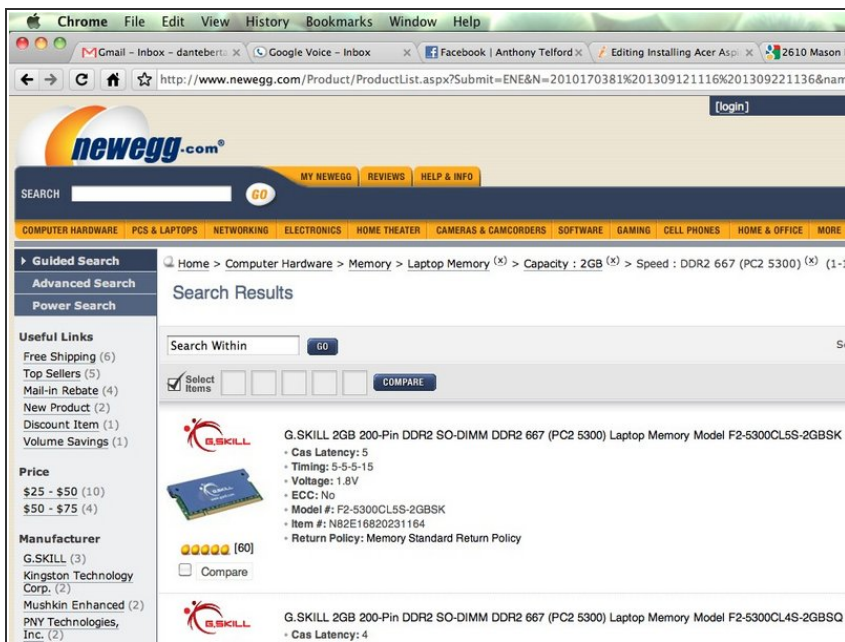

- If needed, pry open door using knife or flat screw driver.

## Step 3

- Remove plastic door to expose lone memory DIMM.
- Press two metal clasps on both sides of the DIMM apart to allow memory module to pop up.

## Step 4

- Head over to Newegg and buy yourself a 2gb DDR2, 667mhz laptop memory to install in your Aspire One.

To reassemble your device, follow these instructions in reverse order.
