

# Mac mini Late 2014 SSD Replacement

Replace the blade-style PCIe SSD in a Mac mini Late 2014.

Written By: Sam Goldheart

#### **INTRODUCTION**

Use this guide to replace the SSD stick in an SSD only, or Fusion Drive model of the Mac mini Late 2014.

## TOOLS:

- iFixit Opening Tools (1)
- Spudger (1)
- TR6 Torx Security Screwdriver (1)
- T5 Torx Screwdriver (1)

#### **PARTS:**

• OWC Aura Pro X2 SSD (1)

## Step 1 — Bottom Cover

- The bottom cover is clipped onto three screw posts.
- Pry near, but not right on the screw posts.

# Step 2

Use the plastic opening tool to pry the bottom cover up off of the Mac mini.

Lift and remove the bottom cover.

## Step 4 — Antenna Plate

- Remove the following TR6 screws from the antenna plate:
  - Three 4.1 mm screws
  - Three 1.9 mm screws

- ⚠ Do not completely remove the antenna plate; it is still connected to the Mac mini by an antenna cable.
- With the I/O ports facing you, flip the antenna plate to the right to allow access to the antenna cable connector.

## Step 6

- Remove the single 3.4 mm T6 screw and washer from the antenna cable.
  - Be careful not to lose the washer when removing the screw.

 Use the point of a spudger to lift the antenna connector straight up off its socket on the airport card.

# Step 8

Carefully pull the antenna cable out from the gap between the power supply and case.

 Remove the antenna plate from the Mac mini.

# Step 10 — SSD

 Remove the 5 mm T5 screw securing the SSD.

• Lift the free end of the SSD up slightly and pull it out of its socket.

# Step 12

Carefully lift the SSD out of the case without scratching or touching the gold contacts.

To reassemble your device, follow these instructions in reverse order.
