

# RCX 1.0 Batteries Replacement

When your RCX runs out of battery power, you'll...

Written By: notexactly

# INTRODUCTION

When your RCX runs out of battery power, you'll need to put in new batteries.

## Step 1 — Batteries

- Place the RCX on a flat surface.

## Step 2

- Flip the RCX over so its black IR window is facing away from you.

## Step 3

- Remove the gray battery cover by lifting from the front (near the IR window). Raise it at an angle and remove it to reveal the green battery compartment.
- You can now remove the batteries and insert new ones.

---

To reassemble your device, follow these instructions in reverse order. The orientation of the gray battery cover doesn't matter.
