## INTRODUCTION

The shutter button is one of the most commonly used buttons on a camera. Therefore, it is also the most likely to break.

### TOOLS:

- [Phillips #00 Screwdriver](#) (1)
-

## Step 1 — Outer Case

- Remove the battery and SD card from the camera.

## Step 2

- Remove the three 3.8 mm screws from the underside of the camera.
- ⓘ Each of the screws is slightly different, so it is important that you note the original location of each screw.

## Step 3

- Remove the 3.2 mm screw from the right side of the camera.
- Remove the 2.2 mm screw from the right side of the camera.
- ⓘ One of these screws is hidden under the USB port cover.
- Lift the side panel off.
- Remove the 1.8 mm screw from underneath the side panel.

## Step 4

- Remove the two 2.2 mm screws from the left side of the camera.
- Lift the plate from the camera.

## Step 5

- Gently lift the rear of the case to remove it from the camera.

## Step 6

- Remove the front of the camera body.

- ⓘ Be sure to keep track of the rubber ring.

## Step 7 — Shutter Button

- Next, unscrew the .115 inch screw fastening the shutter button to the camera.
- Now lift the button away from the camera, exposing the button board.
- You have successfully removed the shutter button.

To reassemble your device, follow these instructions in reverse order.
