## INTRODUCTION

The optical lens is frequently reported as 'not working' or broken. This guide will take you through the steps of removing the malfunctioning lens and installing a new one.

---

### TOOLS:

- [Phillips #00 Screwdriver](#) (1)
  - [iFixit Opening Tools](#) (1)
  - [Tri-wing Screwdriver](#) (1)
-

## Step 1 — Optical Lens

- Remove the two screws from the right side of the camera and the two screws from the left side.
- ⓘ Use a small #00 Phillips flat head screwdriver.
- ☑ Keep all the screws in a container and the two different types separate.

## Step 2

- Remove the three screws from the bottom of the camera.
- Use a three-prong screwdriver for two of the three screws; keep these screws separate.

### Step 3

- Remove the back by carefully flipping it open to the right side.

⚠ There will be a ribbon cable attaching the front panel to the motherboard, be sure not to tear this.

### Step 4

- Pull the LCD screen to the left slightly, then lift and flip it open to the right.

⚠ There is an orange ribbon cable attaching the LCD screen to the motherboard, be careful not to tear it.

## Step 5

- Using a plastic opening tool to flip open the black lever to release the ribbon cable.
- Gently slide the cable out of the lock; the LCD screen is now free to be removed.

## Step 6

- Remove the two screws that are holding the silver paneling on.
- There is a gold foil which will tear upon removal of the silver paneling, this is normal.
- Remove the screw anchoring the motherboard on the right.

## Step 7

- Detach the two ribbon cables on the left side of the camera the same way the LCD cable was detached.
- Detach the gold ribbon cable on the top middle of the camera as well.

## Step 8

- Hold wires on the left with an index finger, to keep them out of the way.
- Carefully wiggle out the motherboard. The flash and the speaker will come with it.
- ⓘ Make sure you have a motherboard that includes the flash and the speaker; these items are both soldered onto the motherboard.

## Step 9

- Lift the lens off of the camera base (there is nothing anchoring it down).

To reassemble your device, follow these instructions in reverse order.
