Step 1 — Case

- Remove four 3 mm screws using a 3 mm Hex screwdriver.

Step 2

- Gently remove the outer casing.

- ⓘ It should be relatively easy to pull apart, but in the case that it is not easy, don't be afraid to apply the necessary force to pull them apart.
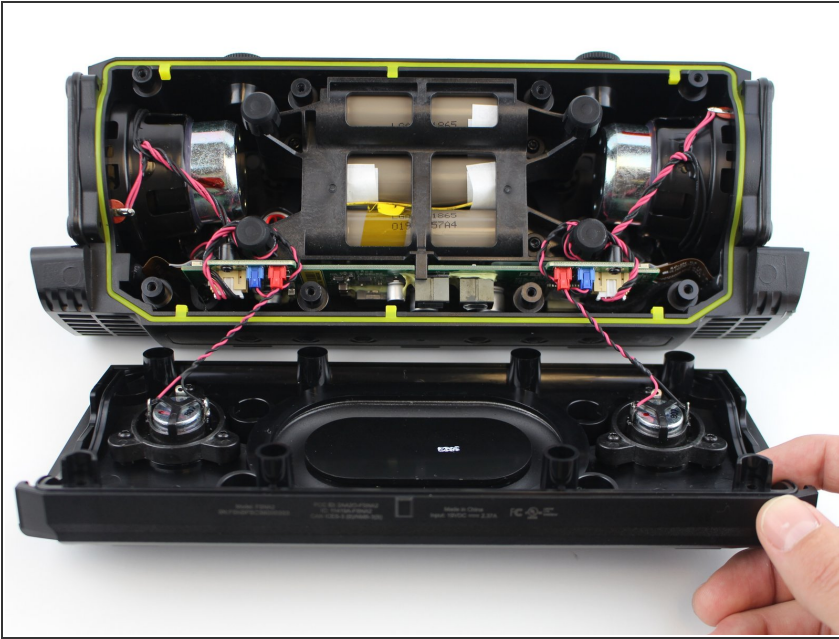

Step 3

- Pull the device from the external case.

- Remove four 12 mm screws using a T10 Torx screwdriver.

- Remove eight 6 mm screws using a T10 Torx screwdriver.

Step 4

- Use your hands to gently remove the side plates.
  - Use the plastic opening tool to pry off the back plate.
  - ⓘ It is best to work on the side with the Fugoo trademark.

Step 5

- Slowly pull the front casing from the back casing. If possible, try to avoid putting any tension on the connected cables.
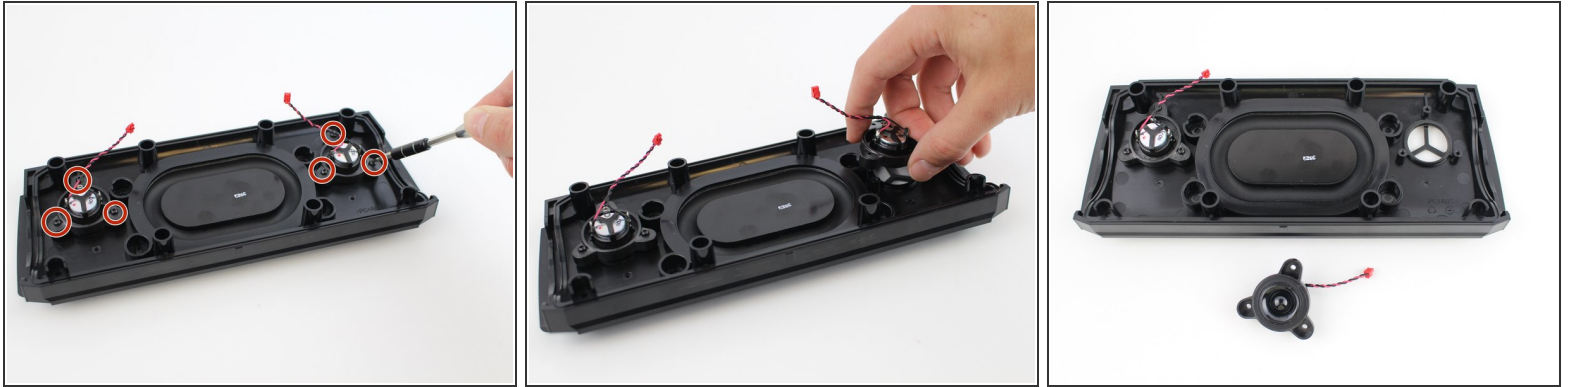

⚠ Separate the two at a slow, consistent pace to avoid damaging the speaker cables.

Step 6 — Speaker

- Carefully untangle the wires that are connected from the speaker to the motherboard.

- Using a tweezer, pull downwards on the base of each red speaker connector to remove them from the motherboard.

This document was generated on 2023-01-08 03:49:07 AM (MST).

Step 7

- Use a #3 Hex screwdriver to unscrew all six 3mm screws."

- While holding the case with one hand, pull up on the speaker you wish to replace.

To reassemble your device, follow these instructions in reverse order.
