Step 1 — Battery

- Switch the first lock, with the padlock icon, to the open position.

- Then hold the second lock with the battery icon to the open position, while sliding out the battery pack.

Step 2 — Front Panel

- Begin by laying the laptop on its backside with the bottom of the laptop facing you.

Step 3

- There will be 11, 2.5x3.0mm Philips head screws that you will need to locate.

- Continue by unscrewing all of them using a 0 Phillips screwdriver.
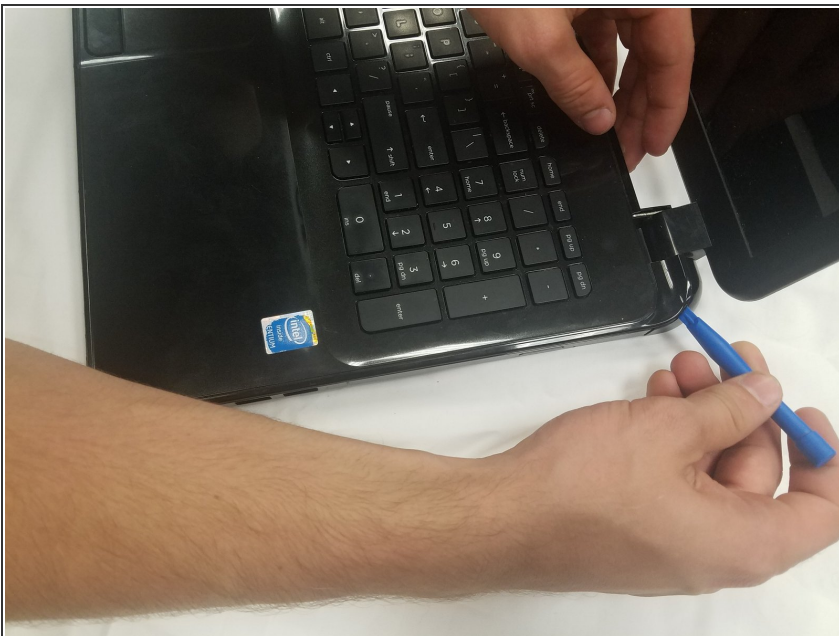

Step 4

- Take off the back panel by removing the 4.0x4.7mm Philips head screw.

- Then using the opening tool, work around the edges to pull off the back panel.

- (i) It will take some force to get the back panel off.

Step 5

- Now flip the computer right side up and open up the laptop.

- You should be facing the screen and keyboard.

Step 6

- Now using the opening tool remove the front panel from the back panel.

- It should start to pop off, you will have to do this step around the entire computer.

- ⚠️ It will give some resistance so take your time to ensure that nothing breaks.

Step 7

- Once you have popped off the panel it should simply be able to lift off of the laptop.

- Keep in mind that the keyboard is still connected to the motherboard. Simply lay the keyboard on top of the screen while you are completing future guides.

- You can replace the front panel now.

To reassemble your device, follow these instructions in reverse order.
